

Nicolás Correa

Full Stack Developer | DevOps & Platform Engineering

Mendoza, Argentina | +54 9 261 258 2481 | ncorrea13@proton.me

ncorrea.com.ar | linkedin.com/in/nicolas-correa-serrat | github.com/ncorrea-13

Advanced Information Systems Engineering student with hands-on experience running CI/CD pipelines with GitHub Actions, containers, and Linux infrastructure. Experienced in building production services, integrating internal and external APIs, and automating operational workflows. Interested in DevOps, Platform Engineering, and Cybersecurity.

Work Experience

Software Developer | Aguas y Saneamiento Mendoza (AYSAM) | *November 2025 - Present*

- Develop Python microservices and automation scripts to connect industrial systems and reduce manual work in accounting and reconciliation workflows.
- Implement full stack solutions within the Oracle ecosystem using PL/SQL and Oracle APEX.
- Design and implement secure REST APIs for production environments, including project tracking modules and server-to-server communication.
- Build integrations that consume REST and GraphQL APIs from internal and external systems.

IT Intern | Caja Forense de Mendoza | *September 2025 - November 2025*

- Provided IT operations support in a systems office, managing servers and virtualized infrastructure with Proxmox VE.
- Maintained and monitored existing virtual machines, ensuring stable infrastructure operation.
- Deployed services to production, including VM provisioning and configuration.
- Managed automated backup processes to protect systems and data.

Reviewer & Contributor | Outlier | *June 2025 - September 2025*

- Contributed to global AI projects involving technical review, prompt writing, code analysis, and model evaluation.
- Reviewed responses related to software development and debugging, assessing the quality of the proposed technical solutions.

Web Software Developer | Freelancer | *December 2024 - March 2025*

- Built full stack web applications for multiple clients using Node.js, TypeScript, and JavaScript, collaborating through Git workflows and agile planning tools.

Backend Developer | Qaizen | *February 2023 - June 2023*

- Developed the core backend logic of a web application focused on bullying prevention and reporting, which reached production and real-world use.
- Designed, implemented, and managed the database architecture using PostgreSQL, PHP, and JavaScript.

Skills

- **DevOps & Cloud:** CI/CD, GitHub Actions, Docker, Podman, Vercel, Kubernetes
- **Systems & Infrastructure:** Linux, VMware, Proxmox, VirtualBox, Networking, WireGuard, Proxies, Nmap, Burp Suite, VPNs, Cloudflare Tunnel, QEMU
- **Backend:** TypeScript, JavaScript, Node.js, npm, pnpm, NestJS, Express.js, Python, FastAPI, Java, Spring Boot, Spring Security, Gradle, Maven, Bash, PL/SQL
- **Databases:** PostgreSQL, MySQL, Oracle, SQL Server, Supabase, Prisma
- **Frontend:** JavaScript, TypeScript, React, Next.js, HTML, CSS, Tailwind CSS, Bootstrap, Oracle APEX
- **Offensive Security:** Burp Suite, Nmap, Wireshark, OWASP Top 10, XSS, SQLi, LFI, CSRF
- **AI Assisted Development:** Claude Code, OpenCode, GitHub Copilot
- **Tools:** Git, GitHub, Postman, VS Code

Soft Skills

- Able to work with non-technical teams and explain technical decisions in plain language.
- Quick to learn new tools and technology stacks independently
- Strong debugging and decision making skills in ambiguous situations

Personal Projects

Pethood | Final Degree Thesis (Team Project) | *March 2026 - Present*

- Lead backend development of a REST API using Express, TypeScript, PostgreSQL, and Prisma, including database schema design and core business logic.
- Set up an automated CI pipeline with GitHub Actions covering linting, type checking, builds, and automated tests on every push and pull request.
- Contribute to a companion mobile app built with Expo and NativeWind, consuming the same API through a shared monorepo.

Homelab | Personal | *February 2026 - Present*

- Operate a platform of 18 services across 3 nodes, isolated in containers and pods with Podman.
- Expose services publicly through Cloudflare Tunnel as a reverse proxy, with no ports open to the internet.
- Automate the deployment cycle with GitHub Actions: image builds on every push and automatic service updates with Podman.
- Configured automated daily and weekly backups with a status notification on every run.
- Implement monitoring with alerts, plus an independent node that keeps notifications running even if the main infrastructure goes down.
- Apply security practices from my Red Team training: attack surface reduction, service segmentation, and restricted administrative access.
- Deploy and experiment with a lab Kubernetes cluster to deepen my understanding of container orchestration.

Bw-tui | Personal

- Built a terminal user interface (TUI) for the Bitwarden CLI with two implementations: a full version in Rust and a lightweight version in Bash.
- Published it under the MIT license.
- Keep the repository up to date with new dependency versions and evolving needs.

Security Laboratory (LabAuSegTic) | Universidad Tecnológica Nacional (UTN - FRM) | *March 2025 - November 2025*

- Performed controlled security tests on Linux servers and web platforms using XSS, SQL injection, LFI, and CSRF techniques.
- Developed Python scripts to automate reconnaissance and vulnerability testing tasks during lab exercises.

Education

Systems Engineer | Universidad Tecnológica Nacional (UTN - FRM) | *March 2022 - Present*

- Final-year student focused on DevOps, Platform Engineering, and infrastructure automation.
- Completed 37 of 42 courses and currently in the 10th semester.

English Language Certification | Instituto Cultural de Mendoza (ICM) | *March 2018 - December 2024*

- Certified by the Dirección General de Escuelas (DGE), Mendoza, Argentina.

Full-Stack Java Web Developer | Egg Education | *November 2021 - October 2022 (500 hours)*

- Scholarship granted by Universidad Nacional de Cuyo (UNCuyo)
- Intensive training in frontend and backend web development using modern technologies.
